AVAILABILITY OF REPRINTS AND PUBLICATIONS

Wildlife Review does not distribute any of the papers abstracted herein, nor can the editor of *Wildlife Review* undertake to obtain copies of these papers for anyone. A reprint of an article published in a journal may be available from the author, from the organization with which the author is affiliated, or from the publisher of the journal in which the article appeared. When an author's address is known, it is shown in square brackets following the citation. Addresses of most wildlife organizations can be obtained from the *Conservation Directory*, an annual publication available from the National Wildlife Federation, 1412 16th Street, N.W., Washington, D.C. 20036, at a price of $4.00 a copy. This directory lists more than 900 agencies and organizations concerned with natural resources use.

Use of funds for printing this publication approved by the Director of the Office of Management and Budget, March 3, 1976.

Camera copy for this issue of *Wildlife Review* has been generated by computer programs developed by the Office of Library and Information Services, U.S. Department of the Interior, Washington, D.C.

Abstract: The species diversity and relative density of native vertebrates from habitats dominated by sagebrush and crested wheatgrass were determined and compared. The species diversity of nesting birds and large mammals, and the relative density of nesting birds, non-nesting birds, reptiles, and both large and small mammals were significantly lower in the crested wheatgrass plantings than in sagebrush habitats.

[Colo. Coop. Wildl. Res. Unit, Colo. State Univ., Fort Collins 80523] Abstract: WILDMIS is a system that supplies information upon which to base mitigation negotiations and plans, land lease terms or mine development plans. Quantified production objectives must be set for each wildlife species of concern. The system estimates changes in population size after either adverse or enhancing habitat changes, and estimates the amount of money needed to reach a given wildlife production objective.

[Range Sci. Dep., Tex. A&M Univ., College Station 77843] Abstract: Expected response of ecological systems to disturbance is usually the basis for mitigation decisions. Information about disturbance characteristics is essential for estimating this Response because of adaptations to disturbance. The following set of characteristics is proposed: type, initial predominant effect, frequency, intensity, duration, reliability, level, and scale.

[Dep. Zool., Southern Ill. Univ., Carbondale 62901] Summary: All (524) male karyotypes in /An Atlas of Mammalian Chromosomes/ (Hsu & Benirschke, 1967-1977) were visually estimated for the chromatin difference between the X- and Y-chromosome-bearing spermatozoa. After more exact measurements of axial chromatid length for 100 karyotypes, 24 species were found in which the difference between X and Y chromosomes was greater than 6.2 percent. It is suggested that such species would be the best for attempts to separate the X- and Y-bearing spermatozoa.

[Off. Zool. Res., Natl. Zool. Park, Smithsonian Inst., Washington, D.C. 20008] Abstract: Juvenile mortality of inbred young was higher than that of noninbred young in 15 of 16 species of captive ungulates. In 19 of 25 individual females, belonging to ten species, a larger percentage of young died when the female was mated to a related male than when she was mated to an unrelated male.

As the Nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering the wisest use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The Department assesses our energy and mineral resources and works to assure that their development is in the best interests of all our people. The Department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.
